

2015 Ready-To-Run

O Gauge & Tinplate Train Sets & Accessories

The Highest Quality Train Sets You Can Buy

A World of Your Own in Three Dimensions

In a world where much childhood play takes place on a two-dimensional screen, model railroading offers a form of play that is both old-fashioned and timeless. For more than a hundred years, children have been using toy trains — along with construction sets, toy figures, empty boxes, and anything else at hand — to build their own imaginary worlds.

While all of this can be accomplished today on a computer screen, there's still enormous value in building something with your hands, making it operate, and sharing it with your friends. Childhood development experts call it “unstructured, imaginative, free play” and they say it helps kids grow mentally and socially. We just think it's fun, and having fun has to be a good thing.

It's all here

In this catalog, we offer everything you need to build a miniature world of your own — or just put up a train around the Christmas tree, or anything in between. You'll find trains that are realistic and others that are whimsical, like our Christmas and tinplate sets.

Each of our ready-to-run sets includes everything you need to get started, all in one box. To expand your layout, we offer well over a hundred RailTown™ buildings and accessories; track systems in O Gauge and Standard Gauge; and a variety of safe, UL-approved transformers.

Start With the Best

Like the toy trains of decades ago, our trains are designed to stand up to childhood play and provide years of enjoyment. Compare our sets with those of our competitors, and you'll find M.T.H. trains are made of better materials, run more smoothly, last longer, and offer more features.

We invite you now to turn the page and see what we have to offer. We hope you'll find items in this catalog that will surprise and delight you, and encourage you to begin a model railroading adventure of your own.

About M.T.H. Trains 2

Why an M.T.H. set is the best way to start your model railroading journey

Train Sets

All-in-one-box train sets in a variety of gauges, styles, and price ranges, each with everything you need to get started

- O Gauge 6
- Separate Sale Engines..... 16
- Trolley 18
- Tinplate 20

Additional Cars..... 26

Rolling stock to add color and interest to your layout

Accessories 36

Buildings, signals, people and other accessories to help create your imaginary world

Track and Layouts..... 64

Expand your empire with our O gauge and Standard Gauge track systems and layout packages

Transformers 84

As your layout grows, choose from a variety of transformers to satisfy increasing power needs — all UL-approved for safety

Digital Command System 86

When you're ready for the ultimate in 21st-century train control, check out DCS — the M.T.H. Digital Command System

M.T.H. TRAINS ARE MORE FUN!

M.T.H. trains are more fun because they feature the sights and sounds that make real trains dramatic and exciting — features that you can control from a handheld DCS Remote Commander* as you walk around your layout:

Great Smoke

Our steam engines feature fan-driven, puffing ProtoSmoke™, the most powerful smoke system in the hobby, and our ES44AC diesel engines include variable intensity ProtoSmoke diesel exhaust.

Speed Control

Many toy trains have two speeds: fast and faster. Most M.T.H. locomotives feature the Proto-Sound® 3.0 sound and control system, which allows our engines

to throttle down as slow as 3 scale miles per hour, highball down the main line, or maintain any speed in between. The Proto-Speed Control™ built into Proto-Sound locomotives acts like the cruise control on a car, keeping your train moving at the speed you select, regardless of hills and curves.

Vivid Engine Sounds

Proto-Sound features crystal-clear digital sounds: the wail of a diesel horn; the melody of an authentic steam whistle; the bell alerting passengers to your arrival or departure; steam chuff or diesel roar; and crew conversations.

Station Sounds

Proto-Sound passenger engines feature arrival and departure

announcements of famous passenger trains. Freight engines include Freight Yard Proto-Effects™, a symphony of freight terminal sounds.

Synchronized Chuff and Puff

Like a real steam engine, M.T.H. steamers feature puffs of smoke and steam chuff sounds synchronized with the drive wheels. Better than any other toy train, an M.T.H. locomotive portrays the drama of a steam engine slowly chuffing and puffing as it pulls out of a station and gets up to speed.

Remote Uncoupling

O Gauge Proto-Sound steam and diesel engines offer remote uncoupling anywhere on your layout, accompanied by the clank of the coupler opening and the hiss of air hoses parting.

Remote Control

Virtually every M.T.H. ready-to-run train set includes a digital remote control. Later in 2015, users will be able to control Proto-Sound 3.0 equipped train sets with their favorite smart phone or tablet when the set is operated with the full DCS Digital Command System featured on page 86.

* Sets cataloged as Proto-Sound 3.0 include the DCS Remote Commander; trolley sets, Loco-Sound sets, and Traditional tinplate sets include a traditional transformer rather than the Commander.

THREE WAYS to get started in MODEL RAILROADING

RailKing® O Gauge

O Gauge has been the most popular size for children's starter sets for more than half a century. Compared with smaller scales and gauges, the large size of O Gauge trains makes them easy for children to handle and better at standing up to the rigors of childhood play. Impressive size and weight also make an O Gauge train a memorable toy that can leave a long-term impression.

Lionel Corporation Tinplate O Gauge

Made of stamped or die-cast metal and boasting bright, colorful paint schemes, tinplate trains hark back to the toys of another era, the pre-World War II decades of the twentieth century. This was a period when silent movies and then radio were among the chief forms of entertainment, and playthings were not intended to be realistic, but to serve as springboards for a child's imagination.

In that world, the toy train was king, proclaimed by Popular Mechanics as "The One Toy That Guarantees a Happy Childhood." Journey back to that era with our Lionel Corporation Tinplate reproductions of Lionel O Gauge trains of the 1920s and '30s, updated with modern Proto-Sound electronics for even more fun. Our tinplate O Gauge trains run on the same track and use the same remote controls as our RailKing O Gauge models.

Lionel Corporation Tinplate Standard Gauge

Significantly larger than O Gauge trains, Standard Gauge toy trains were popular before the invention of smaller electric motors made O Gauge trains possible. In the world of Standard Gauge, it was entirely plausible for a toy train company to advertise a shiny, cartoon-like locomotive as an amazingly realistic model of the latest technology on rails. The Standard Gauge world was inhabited by brightly-colored toys that were masterpieces of the toy-makers art, only loosely related to the real world, and a favorite toy of almost every boy in America.

While original Standard Gauge trains became extinct by the late 1930s, our Lionel Corporation Tinplate models enable you to relive the joy that a child felt when playing with these toys eight or nine decades ago. And thanks to Proto-Sound 3.0, you can enjoy these models with features that a child of the 1920s or '30s could only dream of, including clouds of puffing smoke, a wailing whistle, a clanging bell, and remote-controlled passenger station announcements.

Model Railroading Comes In Different Sizes

The Highest Quality Train Sets You Can Buy **3**

QUALITY AND VALUE

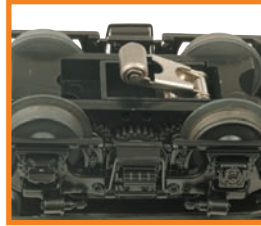

Compare Before You Buy

At M.T.H., we consider the ready-to-run train set our best opportunity to make a great impression on any newcomer to the wonderful world of model railroading. That's why we don't skimp on the quality and value you'll find in every M.T.H. ready-to-run starter set. Compare our sets with those of our competitors and you'll see what makes an M.T.H. starter set the best way to begin your model railroading journey.

M.T.H. ready-to-run train sets include track, transformer, interactive DVD with track layout software and operator's manual.

Every M.T.H. passenger car has a lighted interior and metal trucks and couplers.

Every M.T.H. locomotive features durable metal gears, wheels and axles.

Every M.T.H. locomotive features a smooth, powerful drive train that can haul many additional cars.

Every M.T.H. Ready-To-Run Set features snap-together nickel-silver, rust-proof track, built to stand up to the rigors of childhood play. You can even stand on our O gauge track.

M.T.H. train sets feature powerful transformers and remote controls that can handle long trains as your railroad expands.

READY-TO-RUN SET FEATURES

As explained on the previous pages and detailed below, M.T.H. train sets are loaded with features you won't find in other manufacturers' sets. The following list covers the general features and contents of our train sets. For a specific listing of each set's features and contents, visit our Web site at www.mthtrains.com.

SET CONTENTS

0 Gauge RailKing Sets (except trolleys) include:

- Locomotive
- 3-Car passenger or freight consist with metal trucks and couplers
- 31" x 51" 12-piece RealTrax™ oval
- Lighted track Lock-On, with wires to connect to transformer or power supply
- UL-approved 50-watt Z-500™ power supply with DCS Remote Commander handheld remote control (Proto-Sound 3.0 sets) or Z-Controller (Loco-Sound sets)
- RailWare™ interactive DVD with track layout software

0 Gauge RailKing Trolley Sets include:

- Bump-Reverse Trolley Car
- RailWare™ Interactive DVD With Track Layout Software
- 31" diameter 8-piece RealTrax circle
- ZDC Transformer With Controller
- Lighted track Lock-On, with wires to connect to transformer

0 Gauge Lionel Corporation

Tinplate Sets include:

- Locomotive
- 3-Car passenger or freight consist with metal trucks and couplers
- 31" x 51" 12-piece RealTrax oval
- Lighted track Lock-On, with wires to connect to transformer or power supply
- UL-approved 50-watt Z-500™ power supply with DCS Remote Commander handheld remote control (Proto-Sound 3.0 sets) or Z-Controller (Traditional sets)
- RailWare™ interactive DVD with track layout software

Standard Gauge Lionel Corporation Tinplate Sets include:

- Locomotive
- 2-Car passenger or 3-car freight consist
- 8-piece 42" circle of Standard Gauge track
- Lighted track Lock-On, with wires to connect to power supply
- UL-approved 50-watt Z-500™ power supply with DCS Remote Commander handheld remote control

LOCOMOTIVE FEATURES

RailKing 0 Gauge and Lionel Corp. Tinplate Proto-Sound 3.0 Steam Engines Feature:

- Die-cast metal boiler and chassis on RailKing 0 Gauge models
- Sheet metal boiler and die-cast metal chassis on Lionel Corp. Tinplate models
- Flywheel-equipped motor
- Synchronized puffing Proto-Smoke™
- Operating headlight
- All-metal wheels and gears
- Proto-Sound 3.0 engines feature sound and control system with speed control and crystal-clear digital sounds that include whistle, bell, steam chuff, Passenger or Freight Station Proto Effects™, crew conversations, and atmospheric sounds

- Loco-Sound engines feature speed control and digital sounds that include whistle, bell, and steam chuff
- Remotely controlled Proto-Coupler™ on tender (not featured on Standard Gauge or Loco-Sound locomotives)

0 Gauge RailKing Diesel Engines Feature:

- Intricately detailed, durable ABS body
- Metal frame
- Die-cast metal pilots and trucks
- Twin flywheel-equipped motors
- Operating headlight
- All-metal wheels and gears
- 2 remotely controlled Proto-Couplers™
- Proto-Sound 3.0 sound and control system featuring locomotive speed control and crystal-clear digital sounds that include horn, bell, diesel motor, Passenger or Freight Station Proto-Effects™, crew conversations, and atmospheric sounds.
- ProtoSmoke diesel exhaust in RailKing Imperial ES44AC diesels

Check online at www.mthtrains.com for specific features and contents of all sets.

Pennsylvania Merchandiser

Steam Freight Set

In its heyday, the Pennsylvania Railroad was one of the largest transportation systems the world had ever seen. Over its 30,000 miles of track roamed thousands of locomotives and tens of thousands of cars, most of them designed by the railroad itself and many of them built in the road's own shops in Altoona, PA. Its conquest of the Appalachian Mountains at Horseshoe Curve, just west of Altoona, was and still is a landmark of railroad engineering, carrying freight and passengers between the East and the Midwest.

Relive the glory days of the "Standard Railroad of the World" with this rugged, hard-working freight set. With its huge plumes of puffing smoke, deep chuffing sound, and wailing whistle, it's easy to imagine you're battling your way west across Horseshoe Curve to deliver the goods to Chicago or St. Louis. For even more fun, add extra cars decorated for the Pennsylvania and other railroads — this heavy, die-cast steam locomotive has plenty of power to pull them!

Pennsylvania *Merchandiser* - 2-8-0 Steam Freight R-T-R Train Set

30-4226-1 Proto-Sound 3.0 \$429.95

30-4226-0 Loco-Sound \$359.95

30-74821 \$54.95

Pennsylvania - Ore Car
30-75515 \$49.95

Union Pacific Overland Flyer

2-8-0 Steam Freight Set

Union Pacific *Overland Flyer* - 2-8-0 Steam Freight R-T-R Train Set

30-4228-1 Proto-Sound 3.0 \$429.95

30-4228-0 Loco-Sound \$359.95

On May 10, 1869, the Union Pacific and Central Pacific railroads met at Promontory Point, Utah to complete the first transcontinental railroad. Wagon trains and clipper ships were no longer the only way to the West Coast. More than a century later, the Central Pacific is gone but the Union Pacific is the largest railroad in North America, with more than 8,000 locomotives, 100,000 freight cars, and 32,000 miles of track in 23 states. Due to shared motive power agreements with other railroads, its famous Armour Yellow diesels can be spotted anywhere from Los Angeles to Boston. Proud of its long history, the UP also operates a Heritage Fleet of locomotives that includes Challenger No. 3985, the world's largest operating steam locomotive — soon to be joined by an even larger UP Big Boy that is currently under restoration.

Recreate the excitement of steam era railroading in the American West with this Union Pacific freight set that includes a rugged 2-8-0 steam locomotive with puffing smoke synchronized to the drive wheel revolutions; Proto-Speed Control for smooth and steady speeds from a crawl to full throttle; traction tires for tremendous pulling power; headlight to light up the night; and a full range of sounds from wailing whistle and clanging bell to squealing brakes and crew conversations.*

Union Pacific - Box Car
30-74822 \$54.95

Union Pacific - Ore Car
30-75516 \$49.95

**only in Proto-Sound 3.0 models*

Broadway Limited

2-8-0 Steam Passenger Set

Broadway Limited - 2-8-0 Steam Passenger R-T-R Train Set
30-4227-1 Proto-Sound 3.0 \$449.95

The *Broadway Limited* was the premier train of the premier railroad in America. In an era before air travel was common, the Pennsylvania Railroad's *Broadway* — along with its rival, the New York Central's *Twentieth Century Limited* — were the way to travel between New York and Chicago in style. At the end of a long day at work, you could board the train, have a gourmet dinner in the diner while the porter made up your bed, be rocked to sleep by the gentle motion of your sleeping car, wake up to a fine breakfast, and arrive at your destination in time for a morning meeting.

Imagine you're a CEO or movie star taking in the view from the rear platform of the observation car, as the locomotive's whistle echoes off the Appalachian mountainsides. Our recreation of the Pennsy's finest name train features realistic whistle, bell, and steam chuff sounds, huge plumes of puffing smoke, and station announcements for the *Broadway Limited*. For even more fun, add extra lighted passenger cars, each with interior detail — this heavy, die-cast steam locomotive has plenty of power to get them over the mountains.

Pennsylvania - O-27 Madison Coach
33-6244 \$54.95

Pennsylvania - O-27 Madison Diner
33-6245 \$54.95

Pennsylvania - O-27 Madison Combine
33-6246 \$54.95

The Christmas Express

2-8-0 Steam Freight Set

The Christmas Express - 2-8-0 Steam R-T-R Train Set
30-4229-1 Proto-Sound 3.0 \$429.95

The holiday season and toy trains have always gone together. What better way to create your own family's version of this classic tradition than to include a beautifully decorated Christmas set around your holiday tree. Trimmed in traditional Christmas colors, the M.T.H. *Christmas Express* set captures the spirit and fun of model railroading in an affordable train set that will last for years.

The unique digital sounds of the Christmas Express will amaze your friends and family. Imagine their faces when the whistle wails, the bell clangs, or the conductor announces Santa's next station stop! Of course, seeing the puffing smoke from the locomotive as it pulls its three-car consist with die-cast metal trucks and operating metal couplers is even more impressive and tells all who see it that this is one great set.

Amtrak Intercity Express

Passenger Set

Amtrak Intercity Express Passenger Set
30-4230-1 Proto-Sound 3.0 \$ 439.95

Amtrak- 2-Car O-31 Amfleet Coach Set
30-6521 \$119.95

Upon its creation in 1971, Amtrak inherited a motley collection of beat-up cars from the nation's former passenger carriers. With a mission to attract passengers back to train travel, one of Amtrak's first orders of business was to create a modern passenger fleet.

With a sleek, rounded body that looks more like an aircraft fuselage than a traditional passenger car, the first of nearly 650 new Amfleet cars was delivered in 1975, enabling Amtrak to begin retiring the so-called "heritage fleet." A decade later, Amtrak began the search for an equally modern locomotive to replace its aging fleet of F40PH and GP40 diesels.

Wary of buying more locomotives that were really designed for freight operation, Amtrak searched for a new, lightweight, high-tech alternative. Gen-

eral Electric provided an answer in the AMD-103 (for Amtrak Diesel-103 mph) "Genesis." Featuring a monocoque frame, advanced electronics, and special environmental and safety features, the Genesis represented the state-of-the-art in U.S. passenger locomotives. Forty-four of these 4,000 hp engines, numbered 800-843, were delivered between April and December 1993.

Our Amfleet set replicates the Genesis-powered Amfleet consists that can be seen today almost anywhere Amtrak goes, except the electrified portions of the Northeast Corridor. Our Proto-Sound 3.0-equipped Genesis features Proto-Speed control for smooth, steady speeds from a crawl to full throttle; remote-controlled Proto-Couplers; and a full symphony of train sounds, from passenger station announcements to diesel sounds, wailing horn, clanging bell and crew conversations.

CSX ES44AC Diesel

Freight Set

CSX - ES44AC Diesel R-T-R Deluxe Freight Train Set
30-4233-1 Proto-Sound 3.0 \$449.95

CSX - 4-Bay Cylindrical Hopper
30-75521 \$54.95

CSX - Flat Car with Bulkheads & LCL Containers
30-76602 \$59.95

These deluxe freight sets are headed by the one of most modern and greenest diesels on American rails today: General Electric's 4400 horsepower Evolution Series ES44AC. GE claims the EVOs are "the most fuel-efficient, most environmentally friendly diesel locomotives in history... If every freight train in North America were pulled by an Evolution Series Locomotive, the reduction of smog-producing pollutants would be like removing 48 million cars from the road each year."

Everything about these locomotives has been examined, questioned, and re-thought, generating 25 new U.S. patents in the process. Before they went on sale in 2005, 52 preproduction units were tested in revenue service across North America for more than a year. Today ES44ACs are rostered by every one of the Big Six roads that dominate rail transportation on the continent: Union Pacific, BNSF, CSX, Norfolk Southern, Canadian National, and Canadian Pacific. Around the world, more than 5,000 Evolution Series diesels are operating in 10 countries.

BNSF ES44AC

Diesel Freight Set

BNSF - ES44AC Diesel R-T-R Deluxe Freight Train Set
30-4235-1 Proto-Sound 3.0 \$449.95

Our superbly detailed, top-of-the-line RailKing Imperial model of this modern freight mover features a full range of locomotive sounds recorded from an actual ES44AC. Outfitted with twin powerful flywheel-equipped motors, all-metal wheels and gears, and our revolutionary Proto-Speed Control, our ES44AC will haul long freights at any speed from a crawl to full throttle. Remotely activated front and rear Proto-Couplers allow you to pick up and drop off freight wherever you like. Additional Imperial features on the ES44AC include operating diesel exhaust smoke and flashing ditch lights.

BNSF - 4-Bay Cylindrical Hopper

30-76603 \$59.95

Pennsylvania - 4-Bay Cylindrical Hopper
30-75522 \$54.95

Model the ground-shaking, high horsepower drama of modern railroading with these Rail-King Imperial freight sets — headed by locomotives running today on the Norfolk Southern, one of two roads that dominate rail transportation east of the Mississippi. Created in 1982 from the merger of the Norfolk & Western and Southern Railways, the NS took as its symbol the thoroughbred, to represent speed and reliability — a symbol proudly displayed on the nose of its black and white diesels. But the NS is also proud of its heritage, as its rails include the routes of hundreds of predecessor railroads, dating back to the 1820s.

In 2012, the NS decorated 20 new diesels in paint schemes commemorating the most famous of its predecessors. Our model of the commemorative Pennsylvania diesel honors perhaps the greatest of those “fallen flag” roads, the Pennsylvania Railroad, the self-proclaimed “Standard Railroad of the World.” In its heyday, the Pennsy was one of the largest and best-run companies the world had ever seen, with a budget larger than the U.S. government and 30,000 miles of track serving

Norfolk Southern ES44AC

Freight Set

30-75524 \$54.95

2-8-0 Steam Engine

The 2-8-0 steam engine was first developed in 1864-1865 to provide power for heavy trains running at moderate speeds, especially on steep grades. Alexander Mitchell, the chief mechanic for the Lehigh and Maloney Railroad, an eastern Pennsylvania coal hauler, designed the original 2-8-0. The Pennsylvania Railroad (PRR) was the first to put the 2-8-0 type engine on the rails when they rebuilt a Baldwin flexible-beam engine to a 2-8-0 configuration. For more than forty years, the 2-8-0 Consolidation was America's standard freight locomotive, working hard on virtually every railroad.

Christmas No. 269E Distant Control Freight Set

Christmas - No. 269E Distant Control Freight Set

11-5509-1 Proto-Sound 3.0 \$499.95

11-5509-0 Traditional \$499.95*

**Traditional locomotive features 1930s-style open-frame motor with mechanical reverse unit, and does not include sounds or smoke.*

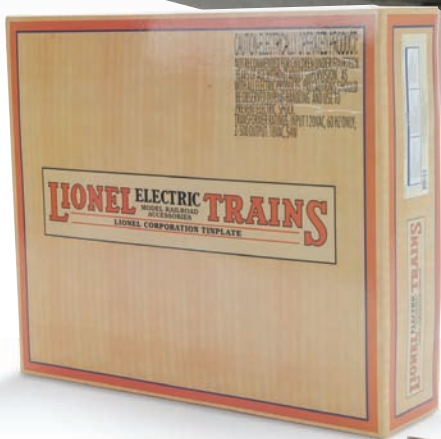

Exemplifying the gleaming sheet metal beauty of the tinplate era, our 269E Christmas set, headed by the 261E locomotive, is a great way to begin your own annual holiday tradition. Cataloged by Lionel in 1935 only, the 261E engine came out in the same year that Lionel announced its “greatest triumph of them all”: its remote-controlled locomotive whistle that added “uncanny realism” to any layout. “Press a button and your locomotive will whistle any signal. Whether it’s moving forwards, backwards, or standing still.”

The 261E locomotive, with its 2-4-2-wheel arrangement, was advertised as a “high-speed, powerful locomotive, with a wealth of detail.” In addition to the 261E steam engine, our holiday set celebrates the colors of the season with a candy striped tank car, holiday-themed hopper, and lighted caboose, all with gleaming bright metal trim.

Thanks to Proto-Sound 3.0 electronics, the Proto-Sound version of our 261E steamer deliv-

ers smoother operation than any original tinplate locomotive, as well as chuff sounds and huge plumes of puffing smoke — synchronized with the drivers’ revolutions — and a clanging bell and wailing whistle guaranteed to brighten your family’s holiday celebrations for years to come.

No. 269E Distant Control Freight Set

The 261E locomotive, with its 2-4-2-wheel arrangement and distant control, was advertised in 1935 as a “high-speed, powerful locomotive, with a wealth of detail and hinged boiler front”, as well as Lionel’s “greatest triumph of them all”: its remote-controlled locomotive whistle that added “uncanny realism” to any layout. “Press a button and your locomotive will whistle any signal. Whether it’s moving forwards, backwards, or standing still.”

“Distant control” was Lionel’s term for the locomotive reverse unit — actually invented by Lionel competitor Ives Manufacturing Company — that allowed an operator to reverse the engine from a distant transformer. Before distant control, reversing was accomplished by moving a lever on the locomotive itself.

Our Lionel Lines version of the 269E set recreates the glory days of tinplate with the advancements of modern electronics. Thanks to Proto-Sound 3.0, our 261E steamer delivers smoother operation than any original tinplate locomotive, as well as chuff sounds and huge plumes of puffing smoke — synchronized with the drivers’ revolutions — and a clanging bell and wailing whistle guaranteed to delight children of all ages.

Christmas - No. 515 Std. Gauge Oil Car
11-30167 \$119.95

In the tinplate era, it was perfectly normal for a 4-wheeled toy to be advertised as an accurate replica of a famous 16-wheeled locomotive. So it was with Lionel’s No. 318E — which was loosely based on the New York Central Railroad’s S-2 electric locomotive, built to haul passengers to and from Manhattan’s Grand Central Terminal after a 1908 law banished steam locomotives within the city limits.

Lionel’s version, which was less sharp-edged and arguably handsomer than the real thing, was cataloged in freight and passenger sets from 1924–1931. Our Christmas-themed replica of a typical 318E freight set from the Roaring Twenties features the gleaming

paint and bright metal trim of the originals, plus the magic of Proto-Sound 3.0: blaring horn, clanging bell, Christmas-themed freight station sounds, and Proto-Speed Control to keep your train running smoothly and dependably at any speed from a crawl to full throttle.

The large size, vivid colors, and stellar sounds of this Standard Gauge set are sure to make it a favorite part of your holiday tradition. Included with the engine and its 3-car train are a DCS Remote Commander handheld controller with 50-watt power supply and an 8-piece circle of track, so you can begin running trains almost as soon as you open the box.

Lionel Lines - No. 309
Coach Passenger Car
11-40074 \$139.95

One of Lionel's most popular lower-priced outfits, the 342E Standard Gauge passenger set came highly enameled in Duo-Tone colors. The set included the 318E Distant Control locomotive, plus a train of illuminated Pullman cars with simulated stained glass panels above each window. Bringing up the rear was an observation car with a brass-trimmed open-air platform, where toy passengers could presumably step outside, smoke an expensive Cuban cigar, and watch the world recede behind the train.

Our recreation of this tinplate classic comes decorated in Lionel's iconic blue and orange color scheme and lettered for the fictional Lionel Lines. Car names commemorate locations of historic Lionel facilities. And thanks to Proto-Sound 3.0,

the set's 318E locomotive features a blaring horn, clanging bell, passenger station announcements, and Proto-Speed control for smooth, steady operation at any speed from a crawl to full throttle.

Operating Box Car w/Signal Man

RailKing operating freight cars add a new dimension and excitement level to your O Gauge layout with realistic action and quiet smooth operation in a way other operating cars cannot.

This car comes to life when parked on an operating track section. When the track section is activated, the car door opens and the signal man emerges with his lantern lit. Then he goes back into the car and the door closes until he's needed again.

Modern Tank Car

CSX - Modern Tank Car
30-73444 \$54.95

The tank car was relatively uncommon until the 1870s, when the nascent petroleum industry ordered large quantities of metal tanks carried on wooden car bodies. By the early 1900s, a standard design had evolved that lasted throughout the steam and early diesel eras: an 8,000-11,000 gallon metal tank perched on a metal flatcar-like underframe.

The one big change during that time was the transition from riveted to welded construction, beginning in the late 1930s. Car builders introduced X-ray inspection of welds to ensure safety, as well as giant annealing ovens that could heat-treat assembled tanks to relieve joint stress. Welded tanks were stronger, less susceptible to rust and corrosion, and less likely to rupture in the event of a wreck.

At the same time as steam engines were disappearing, another innovation completely changed the appearance of tank cars. Beginning in the mid-1950s, a new design took hold: the tank itself became the structural backbone of the car, eliminating the need for a full-length underframe and making bigger tank diameters possible. More recently, tank cars have been required to have "double shelf" couplers designed to stay coupled in the event of a wreck, to minimize the potential for a coupler to puncture an adjacent car. Today's large-capacity tank cars carry a tremendous variety of liquids from oil to chemicals to foodstuffs. Tanks may be lined with glass or other materials in order to carry corrosive liquids, and may have heating or cooling apparatus to protect cargos that are sensitive to temperature extremes.

Gondola Car with Crates

On its customer Web site, the Union Pacific Railroad characterizes a gondola as an “extremely sturdy open design” for carrying “rugged unfinished commodities”; its “large flat interior design with side walls” is described as “more flexible than a flat car.” These qualities make the modern gondola particularly popular with the steel industry, for transportation of loose materials like scrap metal, waste, coke, and slag as well as finished products like iron or steel plate, pipe, structural steel, and rails for railroad track. Other commodities commonly shipped in these versatile cars include mineral ores, granite slabs, gravel, logs, lumber, railroad ties, large crates, and even prefabricated railroad track, also known as “panel track.”

The name for these cars actually predates railroads. In the early 1800s, utilitarian flat-bottomed boats with low sides, used to transport coal down the Potomac River to the Washington D.C. area, were called gondolas as a spoof on the much fancier Venetian gondolas. Similarly shaped coal-carrying cars on early railroads earned the same moniker. As more specialized cars were invented for coal service, the gondola evolved into the general-purpose car it is today.

Like all RailKing freight cars, these gondolas feature die-cast metal trucks and couplers, metal wheels and axles, and durable, intricately detailed ABS plastic bodies built for a lifetime of model railroading. This model also includes detailed, removable packing crates.

Flat Car with Bulkheads and LCL Containers

On its customer Web site, the Union Pacific Railroad characterizes flat cars as available “in a variety of lengths, tonnage and capacities for specialized commodities that are not subject to damage from the elements.” Attributes are listed as “easier to load and unload freight,” “can drive machinery directly on to the car,” and nailable wood or steel floors that allow “nail blocking and bracing to the floor for a damage-free, secure shipment.” For shipping large or bulky items, from machinery to vehicles, the flat car has been the solution since the dawn of railroading.

This RailKing model depicts a flatcar with the added protection of end bulkheads to prevent a load from shifting past the ends of the car. Bulkheads are particularly useful with loads such as steel pipe and lumber, as well as the removable LCL containers on this model.

LCL (for “less than carload lot”) containers date back at least to the 1920s, when an article in *Shipper & Carrier* magazine proclaimed that containers were “calculated to work revolutionary changes in freight handling.... The new system provides that the portable ‘containers’ shall be loaded and locked at the shippers’ own store, and conveyed by motor truck and lifted by crane aboard the car. At destination the locked container is carried by motor truck direct to the consignee’s door. All of the handling and checking processes between shipper and consignee are done away with at great saving of labor and time.” While that language would apply perfectly today to modern intermodal containers, LCL-style containers are still in use in specialized services such as the “trash trains” that transport garbage to remote dumping sites.

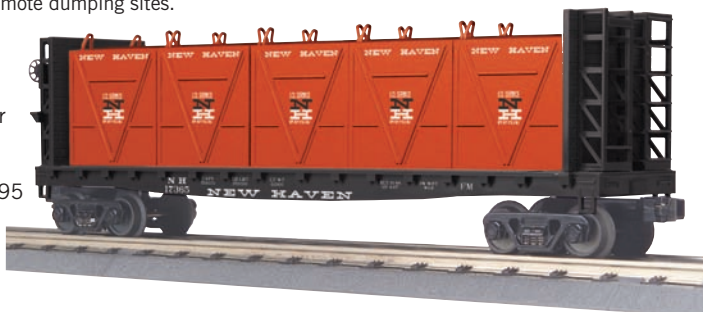

New Haven - Flat Car with Bulkheads and LCL Containers
30-76607 \$59.95

Pittsburgh & Lake Erie - Flat Car with Bulkheads and LCL Containers
30-76606 \$59.95

Ore Car

Duluth Missabe & Iron Range - Ore Car
30-75517 \$49.95

Pittsburgh & Lake Erie - Ore Car
30-75518 \$49.95

Canton - Ore Car
30-75519 \$49.95

Southern Pacific - Ore Car
30-75520 \$49.95

Why are ore cars so short? Because the iron ore they carry is considerably heavier than typical hopper loads like coal, so a short car of ore fills the load capacity of its trucks. Ore cars, also called “jennies,” were and still are a common sight in the Iron Range region of Minnesota and nearby states, where they shuttle between mines and Great Lakes ports. On the receiving end, jennies travel between ore docks and steel mills in a number of states. While they’re commonly associated with upper Midwestern ore-hauling roads, ore cars have in fact been rostered by nearly 50 North American railroads, and at least a dozen have owned significant numbers of jennies.

Until World War II, ore cars generally carried “direct shipping” ore: ore that was rich enough in iron (60% or more) that it could be shipped direct to steel mills as a raw material. By the end of the war, however, the richer ore deposits had largely played out. Lower-grade taconite, once considered a waste product of mining, became the raw material of choice. Rather than being shipped as raw ore, taconite is refined and rolled into small pellets containing about 65% iron. So for more than half a century, the main payload of ore jennies has been taconite pellets, as well as occasional loads of sand or gravel.

4-Car O-27 Madison Passenger Sets

Add passenger service to your railroad with these detailed models of the heavyweight passenger cars that served travelers coast to coast for most of the twentieth century. Each car features die-cast metal trucks and couplers as well as a lighted interior (except baggage cars), and will operate on any 3-rail O gauge track, including the tightest O-27 curves.

O Gauge RealTrax®

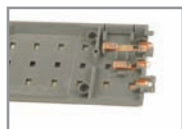

Rugged - Realistic - Reliable

At M.T.H. we believe a track system should allow your model railroad empire to grow. The RealTrax system includes 72 different components for maximum expansion capabilities. You'll find bridges, curves of all sizes, elevated and graduated trestles, crossovers, and every straight and curved configuration you'll need to create your own model railroad empire. And every piece of RealTrax is rugged, realistic, and reliable so you can have fun running your trains.

Rugged

Because most toy train empires begin on a carpet or floor, RealTrax is designed to hold up to the rigors of childhood play. Strong snap-together connections make it easy to assemble or change a layout in minutes. And the built-in roadbed helps keep dirt on the floor away from the wheels and gears of your trains.

Realistic

With its realistic crossties and ballasted roadbed, RealTrax looks like the mainline track used by heavy freights and high-speed passenger trains. Unlike older O gauge track with a round cross section, RealTrax uses flat-top "T"-rail like a real railroad.

Reliable

Nickel silver rail ensures that RealTrax will never rust. Spring-loaded phosphor bronze contacts provide superior electrical connections between track sections. The contacts are spring loaded to maintain a solid connection over time and are highly resistant to corrosion of any kind.

RealTrax switches feature the same durable construction as regular RealTrax sections and utilize long-lasting switch motors that provide precise throws every time. The reversible motor mechanism quickly snaps onto the other side of the switch if space is a problem. No disassembly of the switch is required! Lighted switch controllers allow you to throw a switch remotely from a distance, and lights on the controller indicate which direction the switch is thrown - green for straight and red for curved.

REALTRAX®
BY M.T.H. - THE MODEL TRAIN EXPERTS

RealTrax[®] Layouts

STORY OF OIL 13x23 FEET

This layout is a good example of how a loop can be elaborated until it doesn't look like a loop anymore. This track plan also thinks like a point to point, because we are following the entire cycle of the oil business, from the oil well to the gas pump and beyond. On the left we have the oil fields and the storage tanks for the freshly extracted crude oil. At the storage tank station, you can fill tank cars with black gold. These tank cars will be dropped off at the oil refinery in the middle of the layout. You'll need to build the refinery yourself, but it's a relatively easy model to build. Refineries are basically flat-roof metal buildings surrounded by LOTS of pipes and storage tanks. Empty tin cans, tin foil, and lots of flexible drinking straws colored silver with a paint marker will create the effect quite nicely.

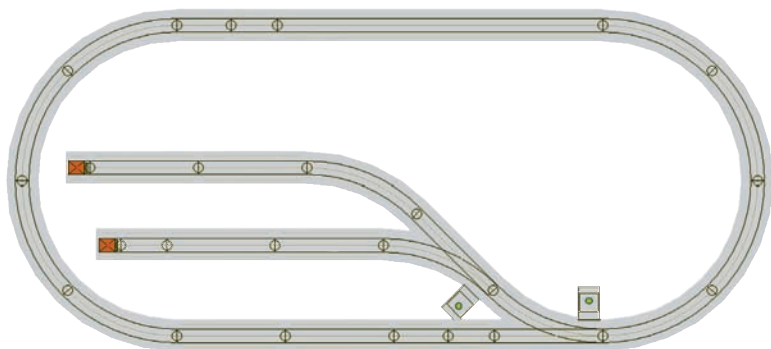

Behind the refinery is a plastics factory. Here you drop tankers of oil on one track and carry away covered hoppers full of plastic pellets from the other track.

Finally, we pass into a suburban area with houses and a gas station. This gas station is unusual in that it receives its gasoline in a tank car that you leave on the siding in the back, rather than having it trucked in. The operating gas station and car wash add the final touch of delivering the gas to consumers!

TRACK REQUIRED

- (38) MTH 40-1001 10 inch straight
- (7) MTH 40-1016 5.0 inch straight
- (3) MTH 40-1019 30 inch straight
- (4) MTH 40-1024 track bumper
- (5) MTH 40-1043 0-42 lefthand switch
- (3) MTH 40-1044 0-42 righthand switch
- (40) MTH 40-1042 0-42 curve
- (6) MTH 40-1017 4.25 inch straight
- (2) MTH 40-1006 90° cross
- (6) MTH 40-1012 5.5 inch half straight
- (2) MTH 40-1008 uncoupling track
- (4) MTH 40-1018 3.5 inch straight

ACTION IN 3x6 FEET

Here's a layout small enough to fit in a bedroom, yet still big enough to give you the fun of real railroading. The track plan is basically a loop, but the small yard enables you to have passengers and switching operations, in addition to continuous running trains. With detailed scenery, this layout makes a pleasing and enjoyable railroad for the modeler with limited space.

TRACK REQUIRED

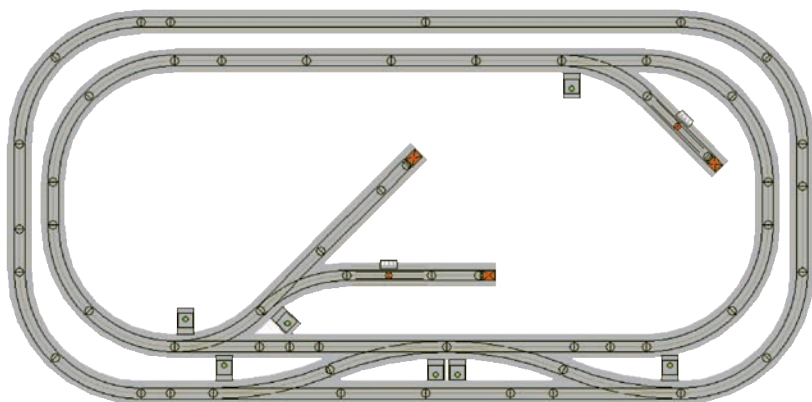

- (9) MTH 40-1002 0-31 curve
- (1) MTH 40-1019 30 in straight
- (3) MTH 40-1017 4.25 in straight
- (2) MTH 40-1016 5.0 in straight
- (1) MTH 40-1004 031 righthand switch
- (1) MTH 40-1005 031 lefthand switch
- (6) MTH 40-1001 10 inch straight
- (2) MTH 40-1024 track bumper

SPACE

The most important limitation most railroads encounter is space. Does the house have a spare room, basement, or attic? These are by far the most popular places for model railroads, because they use space that nobody else in the house wants. That means the railroad can be set up permanently, with appropriate lighting, backgrounds, seating, and even a little workbench for assembling buildings, painting cars and so on. If you are lucky to have such a space available, get a tape measure and plot out how large the room is. The size and shape of the room will help define your railroad.

RealTrax[®] Layouts

DOUBLE TRACK IN 4x8 FEET

This layout strikes a nice balance between action and scenery. Create a contrast between town and country by using scenic separation to stretch the 4x8 feet into a whole countryside. Your town might have an attractive station (complete with street clock and operating American flag) and a coal loader, as well as a water tank for your engines. Add a lake and a farm on the opposite shore, with a siding for picking up milk cans in the morning and unloading empties in the evening. And with two tracks, you can run two trains at a time, ensuring constant movement.

SHAPE

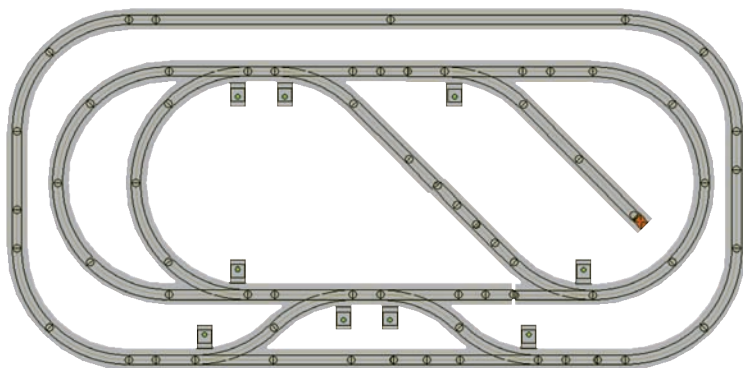

Often, instead of getting an entire room or basement to itself, a railroad can acquire several small adjoining areas, spread across one or more rooms. Perhaps the main line will fill the corner of the basement rumpus room, with storage yard tracks running through a tunnel in the wall and onto a shelf over the washer and dryer. Perhaps the line can fill shelves along two walls of a room.

These kinds of limitations can radically change the track plan of your railroad. In addition, these sorts of small intrusions into other space can provide areas of expansion for a more conventional train table line that needs room to grow.

TRACK REQUIRED

- (16) MTH 40-1002 0-31 curve
- (1) MTH 40-1005 031 lefthand switch
- (2) MTH 40-1004 031 righthand switch
- (4) MTH 40-1018 3.5 in straight
- (9) MTH 40-1001 10 inch straight
- (2) MTH 40-1012 5.5 inch half straight
- (3) MTH 40-1017 4.25 in straight
- (6) MTH 40-1016 5.0 in straight
- (2) MTH 40-1019 30 in straight
- (2) MTH 40-1020 072 righthand switch
- (2) MTH 40-1021 072 lefthand switch
- (3) MTH 40-1024 track bumper
- (2) MTH 40-1008 uncoupling track
- (2) MTH 40-1014 10 inch girder bridge

MAX ACTION IN 4x8 FEET

Just as the name implies, this track plan really packs in the activity! As many tracks as will fit, plus all the operating accessories to keep them humming, make this a great plan for the modeler who likes to keep his freight trains busy. With two tracks, you can keep a train rolling at all times while another works its way around serving the many industries in this town. Accessorize this layout with lighted Rail-Town buildings and an operating coaling tower, water tower, freight transfer dock, or crossing gates, and you and your visitors will have plenty to see and do!

TRACK REQUIRED

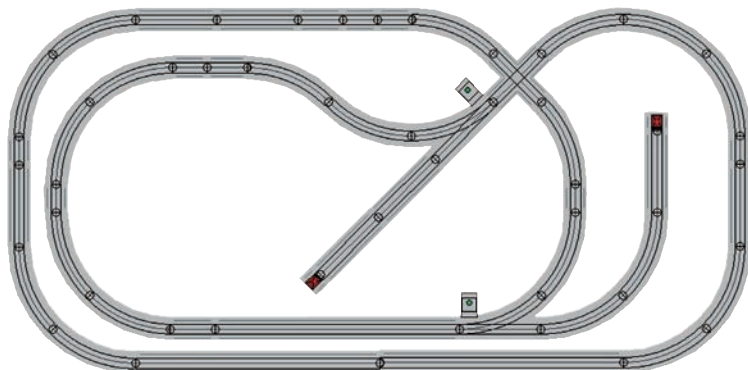

- (18) MTH 40-1002 0-31 curve
- (2) MTH 40-1019 30 in straight
- (6) MTH 40-1001 10 inch straight
- (5) MTH 40-1016 5.0 in straight
- (6) MTH 40-1004 031 righthand switch
- (16) MTH 40-1018 3.5 in straight
- (2) MTH 40-1012 5.5 inch half straight
- (3) MTH 40-1017 4.25 in straight
- (3) MTH 40-1005 031 lefthand switch
- (1) MTH 40-1024 track bumper

ROOM TO OPERATE

The kinds of railroad action you most enjoy will also influence your layout. Do you like lots of switching cars in the yard? Then your layout will feature a big yard, which often works well on a shelf. Do you want long mainline runs through rural terrain? Then your layout will probably require a twice-around loop with mountains, trees, or other view blockers to make the trip look longer.

RealTrax[®] Layouts

TWICE AROUND 4x8 FEET

One way of making your layout seem bigger is to have the trains make two trips around the table before it gets back to the starting point. This track plan does just that. It also includes a couple of sidings for you to pick up and drop off cars. If you have more room and can put in more straight track, this plan can become very realistic.

TRACK REQUIRED

- (4) MTH 40-1018 3.5 in straight
- (20) MTH 40-1002 0-31 curve
- (3) MTH 40-1019 30 in straight
- (7) MTH 40-1001 10 inch straight
- (1) MTH 40-1006 90° cross
- (3) MTH 40-1017 4.25 in straight
- (2) MTH 40-1012 5.5 inch half straight
- (1) MTH 40-1005 O31 lefthand switch
- (1) MTH 40-1004 O31 righthand switch
- (1) MTH 40-1016 5.0 in straight
- (2) MTH 40-1024 track bumper

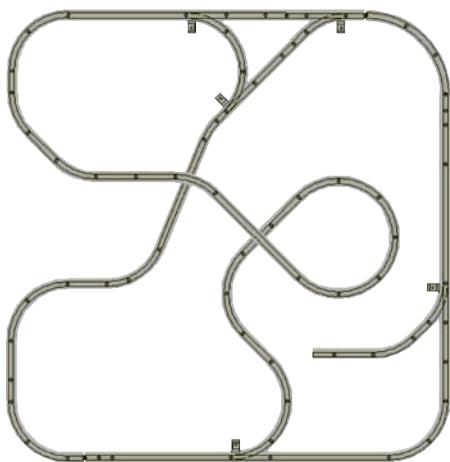

THE SCENIC ROUTE

The style of scenery you want will also determine the shape of your layout. Mountains and bridges will require more up and down space than fields and forests. A desert will make a big open, flat area, that may require a mountain to hide the other end of the track. Cities can look great and provide a real contrast with rural scenery, but buildings do take up considerable space. Tracks move differently through different kinds of terrain, with a mountain logging railroad having a very different track plan from the Union Pacific roaring across the Nebraska cornfields.

TRAIN TIME

Tracks were also used differently at varying points in history. If you are modeling the 1850s, there won't be much call for double-track mainlines or complex switchyards. On the other hand, if you are modeling today's high-speed container trains, complex yards and multi-track should be the rule.

WILD WEST/CIVIL WAR 10x10 FEET

This is an old-time layout which incorporates several interesting features. The most challenging is the helix curve around the mountain, where the train passes over itself. This not only gives you a cool over/under effect, but it captures the rugged flavor of early railroads clawing their way through the mountains to open up the country. This will require a relatively steep grade, but since 1860s trains were short and pulled by little 4-4-0 locomotives, you shouldn't have trouble operating it. You'll want to be sure to use RailKing engines with Proto-Sound 2, so that you have the speed control, otherwise you might have some runaway trains!

Another important detail is the arrangement of track switches up by the town. This arrangement is called a "wye" because it resembles the letter "Y." It's important because a wye enables you to turn trains around, so they can face either direction. It's sort of like backing your car into a driveway to change directions on a street. A wye can be a helpful addition to all sorts of track plans and the one shown here is about as compact as you can build.

To keep the trains busy, there is also a mine on the side of the mountain, served

by the siding in the lower right corner. The water tank makes sure the trains don't get stuck out in the wilderness, miles from town. And the track from the bottom of the wye passes through a tunnel in the mountain, which is always a popular sight with visitors.

If you want to represent the Wild West, you can paint your scenery in desert shades of orange and brown, with little cacti and tumbleweeds. For a Civil War scene, cover the mountains with pine trees, and fill the fields with grass, farm crops, and soldiers. In the West, the mine might be producing gold or silver, in the Civil War, it's probably digging coal.

TRACK REQUIRED

RealTrax® Catenary

The RealTrax® Catenary System and RealTrax Catenary Expander are O Gauge's only ready-to-use catenary systems that setup in minutes! Simply position the authentic-looking catenary poles and wires per your layout's requirements, and enjoy the realism of a fully functional easy-to-use catenary system.

8-Piece System Features:

- Compatible with RealTrax® or any other O-Gauge Track
- Removable RealTrax® Lock-On Base Connection
- Thumbscrew Power Terminals
- Adjustable Pole Spacing
- Adjustable Messenger Beam Height
- Adjustable Wire Positioning
- Base Mounting Screws Included

RealTrax - 8-Piece Catenary System
40-1035 \$149.95

RealTrax - 4-Piece Add-On Catenary System

O Gauge ScaleTrax™

ScaleTrax™ by MTH Electric Trains is the ultimate track layout solution for which detail-oriented scale 3-rail model railroaders are searching. No longer will an O Gauge modeler have to accept the “tubular” track look because ScaleTrax™ offers maximum accuracy and the exceptional quality of MTH products. They are perfect for your authentic looking layout.

Each ScaleTrax™ track section features two solid extruded authentically profiled Nickel Silver rails and one inconspicuous solid extruded center rail - all affixed to accurately sized and spaced track ties. No longer will your consists ride too high off the ground. Best of all, the end-of-rail electrical connectors come pre-welded to the underside of each section. There simply is no need to plug in your soldering iron when using ScaleTrax™.

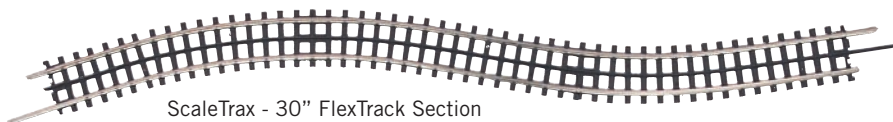

Whether assembling your first layout, adding to a present layout, or replacing your old track, ScaleTrax™ is the most rugged, realistic, scale proportioned, easy-to-use 3-rail scale O-gauge track system available.

ScaleTrax™ Layout Packages

Don't have the time or inclination to design your own layout? Check out ScaleTrax layout packages, featuring track plans designed in a variety of sizes and shapes, many with the ability to easily expand into a bigger and bigger empire. Each package includes all the track and switches needed to build a complete layout. For details and track plans, click the ScaleTrax logo at the bottom of the M.T.H. home page, www.mthtrains.com. Order the Scaletrax components from any M.T.H. Authorized Retailer and M.T.H. will drop ship your order directly from Maryland. If you prefer to design your own plan use RR Track layout design software and take your design to any M.T.H. Authorized Retailer and we will drop ship the order for them.

Roosevelt Junction

Roosevelt Junction starts small at just 4 ft. by 8 ft., but can grow in four phases to reach an awesome 8 ft. by 16 ft. railroading empire. Each 4 ft. by 8 ft. phase adds new operating possibilities. As you grown in the O Gauge railroading hobby, your layout can grow with you.

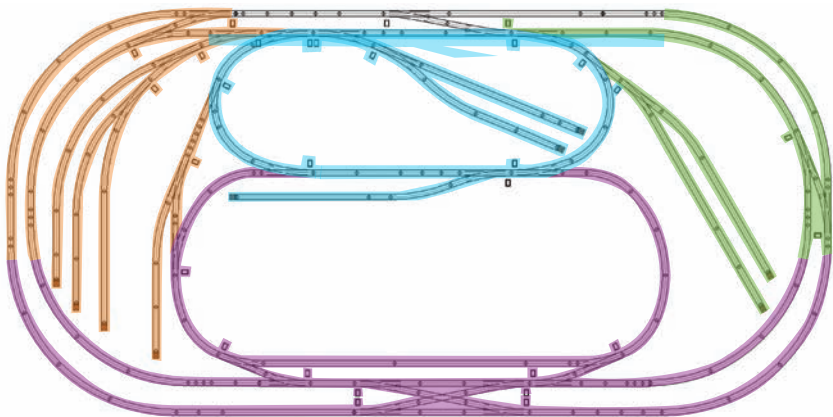

Roosevelt Junction - Phase 1

Roosevelt Junction begins as a small railroad with lots of fun. Sidings on both sides of the mainline allow for interesting switching operations between an engine yard and freights sidings. The mainline allows for continuous running when you want to sit back and watch the trains. The passing siding is long enough to accommodate most starter set trains, allowing two trains to pass each other.

ScaleTrax Pieces

Item #	Description	MSRP	QTY	Extension
45-1001	10 inch straight	\$4.99	6	\$29.94
45-1002	0-31 curve	\$4.99	6	\$29.94

Roosevelt Junction - Phase 4

The fourth and final addition to Roosevelt Junction transforms the layout into a hi-rail empire. The layout now sports a double track mainline with minimum O-72 curves as well as an interior O-31 loop allowing independent operations of three trains. Carefully located crossovers permit east access from either O-72 mainline into the yards. Three yard spurs connect to the mains with O-72 or larger curves so that even the largest articulated locomotives will feel right at home in Roosevelt Junction.

POWER UP with the best transformers in model railroading!

100 Watts

Z-1000™ Transformer
40-1000 \$109.95

100-Watt Accessory Power Supply
40-1000A \$89.95

With 14 Volt Accessory Port

Whether you operate with conventional AC power or the M.T.H. Digital Command System (DCS), our UL-approved transformers offer the best way to power your layout. Choose the 100-watt Z-1000™ for a small- to medium-sized layout, or step up to the 400-watt, feature-laden Z-4000®, the most powerful UL-approved transformer in the hobby. All M.T.H. AC transformers offer:

- Incredibly smooth, wide range throttle for precise speed control
- Bell and whistle/horn buttons that work with all makes of AC-powered locomotives
- Fast-acting circuit breakers to protect your equipment
- Continuous useable wave power output, compatible with all AC-powered engines

RailKing Controller Set
40-750C \$59.95

*Includes Z Transformer Controller,
RealTrax lock-on (40-1003), RealTrax wire
harness (40-1015)*

50 Watts

Z-500™ Transformer
40-500 \$69.95

*Designed for smaller layouts, the Z-500 offers
the same control features as the Z-1000 but
with less power.*

TIU/Barrel Jack Adapter Cable
50-1017 \$10.95

RealTrax Wire Harness
40-1015 \$4.99

Z-DC1 DC Transformer
40-200 \$29.95

20 Watts

- U.L. Approved
- Smooth Operating Throttle Knob
- Built-In Circuit Breaker Protection

Z-DC300 30 Watt DC Transformer
40-300 \$79.95

30 Watts

400 Watts!

The Most Powerful

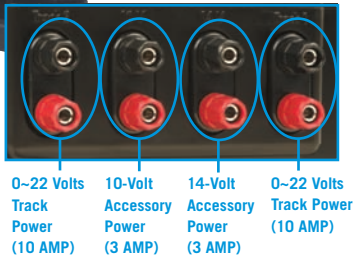

UL Listed AC Transformer!

The instruction manual for every M.T.H. transformer is available at www.mthtrains.com
Just look up the transformer in our *Product Search* feature.

Z-4000® Transformer
40-4000 459.95
Two throttles, each with its own complete set of controls, plus 10-volt and 14-volt accessory outputs

Accepts bare wires, spade lugs, or banana plugs (recommended) for easy connections

WHY THE UL OR SP LISTING?

To protect our customers and their trains, M.T.H. Electric Trains is committed to manufacturing safe, UL or CSA approved transformers and power supplies. By subjecting our transformers to the strenuous tests and requirements of Underwriters Laboratories and/or CSA, M.T.H. helps ensure that our products meet the same requirements as other consumer electronics sold today. When choosing a new transformer, model railroaders should only look for those that have received a UL or CSA listing.

SIMPLY THE BEST

DCS is **SIMPLE** to use.

It's **ACCESSIBLE** from any iOS or Android smart phone, tablet or the included remote.

It can be **UPGRADED FOR FREE** over the Internet.

It can **DO MORE** for less money than other command control systems.

It's why you'll have **MORE FUN** operating your trains than ever before.

It can run over 5300* Proto-Sound® 2.0 & 3.0 engines and every TMCC®, EOB, or Legacy™ engine ever made — and run 99 of them at the same time, on the same track, independently, in command mode.

It can also **RUN ALL CONVENTIONAL AC LOCOMOTIVES** without the purchase of any additional hardware.

With the addition of an Accessory Interface Unit (AIU), it can **OPERATE ANY O SCALE ACCESSORY OR SWITCH**. It can **CREATE SCENES AND ROUTES** that are triggered with one push of a button.

* Number of different Proto-Sound 2.0 and 3.0 engines cataloged through the 2015 Volume 1 Catalog. While all Lionel TMCC features can be accessed by the DCS handheld remote, at present some Legacy features cannot be accessed by a DCS remote.

WAY TO RUN A RAILROAD™

Command Control Explained

In conventional operation, an AC or DC transformer varies track voltage to adjust engine speed and direction. Command systems such as DCS, however, put a constant voltage on the track (around 18 volts for DCS) and vary speed by telling each engine how much of that voltage to use. Command control allows different engines to do different things — like run at different speeds, go in different directions, or make different sounds — even when they are on the same track.

In the DCS system, commands such as speed, direction, and sound control are sent as radio signals from the handheld throttle to a TIU (track interface unit). The TIU translates those radio signals into digital information that is sent through the rails and picked up by a receiver in the appropriate engine — telling it to go, for example, 37 miles per hour, blow the whistle,

smoke more heavily, or any other command. DCS locomotives can also send information back to the handheld to let the operator know what they're doing.

Request a Complimentary DVD on DCS and M.T.H. technology. Log on to the DCS web site, www.protosound2.com

Try It at your local DCS Demo Center

Take your favorite Proto-Sound 2.0 or 3.0 engine to any DCS Demo Center and experience the additional features your engine has with DCS control. To find your nearest demo center or request your complimentary DVD, visit www.mthtrains.com.

M.T.H. Railroading App

Technology continues to expand in all aspects of our lives; we believe it must continue to do so in our products and our control systems if we want our hobby to remain relevant in the world of smart phones, tablets and wearable technology.

Why put a remote control in the hands of an operator when he or she probably has an even more powerful device in their pocket? Why shouldn't a modeler control their layout with their phone, when they can already use that phone to run their television, adjust their thermostat, and activate their home alarm system? More importantly, how many new members can we attract into our hobby when we bundle that hobby with technology they use every day?

Enter our first model railroading app

In 2015, M.T.H. will release smart phone and tablet apps that will allow operators to run their trains from Apple iOS or Android phones or tablets. That means your Apple iPhone or Samsung Galaxy can do one more thing we only dreamed about fifteen years ago when we introduced DCS. Your favorite Android tablet or Apple iPad will bring the DCS Digital Command

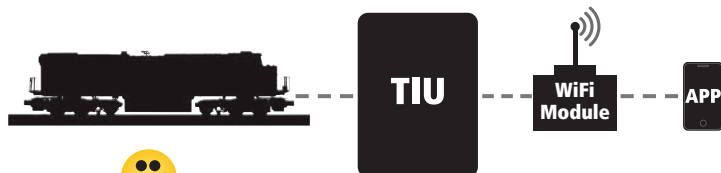

System to life in a way you never thought possible when you first picked up a DCS remote control. Any of these smart devices can run our new app. That means anybody who visits your layout can run trains — the days of fighting over the remote control are over!

Whether you're running Android or iOS, our DCS app will allow you to control your entire layout in command or conventional modes without using a DCS handheld remote. You'll still need a TIU (Track Interface Unit) along with a new, separately sold DCS WiFi module.

Simply plug the module into the TIU, search for its WiFi signal on your phone or tablet, and you'll be running your layout in command mode in no time. Everything the DCS handheld remote can do, the app can do — but your experience will be better and in full color!

Our new app isn't limited to just DCS control either. With it, you'll be able to access special pages on the M.T.H. website, see the latest catalogs and news articles, and shop for M.T.H. products. Look for the app this year — it's gonna be fun.

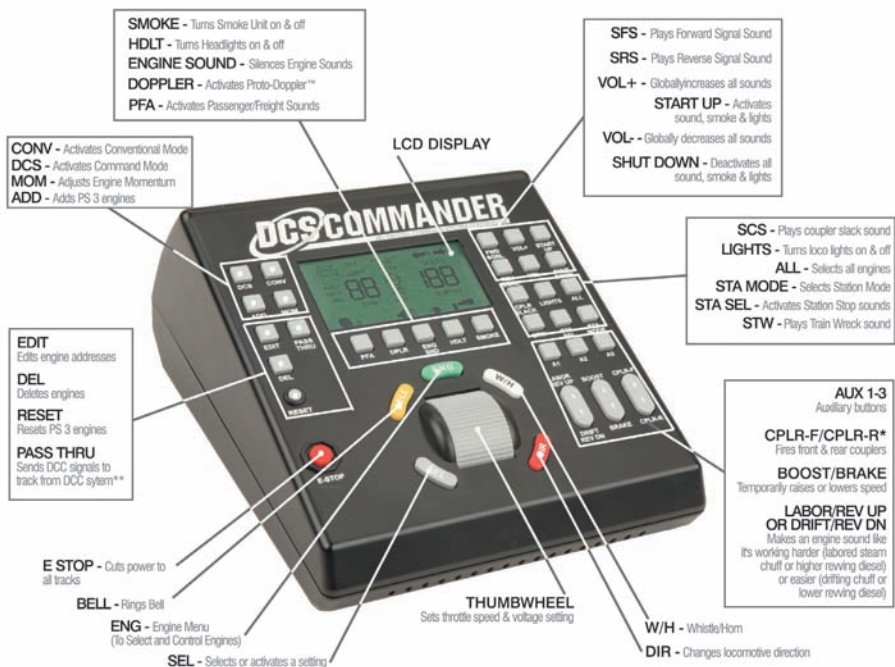

See A Demo At www.mthtrains.com

What Can Your Remote Do?

DCS COMMANDER

HO DIGITAL COMMAND SYSTEM CONTROLLER

More Features Than Analog DC or DCC Command Control Run Up To 10 Engines At Once!

* Operating couplers are not available on HO locomotives at this time.

** Customer supplied DCC system Required

The next generation of the DCS Digital Command System is here. The all-new DCS Commander brings a less expensive, but powerful command control device to your O Gauge and HO DC powered layouts. Connect a DCS Commander between the wires of your existing DCC system or DC power supply to the track and you can switch back and forth between DCS and Analog DC operating modes with just a push of a button.

Because M.T.H. Proto-Sound 2.0 or 3.0 locomotives can operate on both AC or DC current, the DCS Commander may be the affordable DCS command control option you've been looking for. Available alone or bundled with a 100 watt power supply, The DCS commander outputs 18 volts of DC power and includes

a built-in 5amp resettable breaker making it a perfect solution for small M.T.H. O Gauge layouts exclusively running Proto-Sound 2.0 or 3.0 locomotives.

For HO operators, the DCS Commander Controller Set is a perfect power solution for almost any size HO layout. HO operators whose layouts are already outfitted with a DC power supply can choose the individual DCS Commander and plug their existing power supply right into the Commander's power inputs.

The DCS Commander provides the user with intuitive control of multiple Proto-Sound 2.0** or later equipped locomotives. For each locomotive, more than 32 functions are available at the touch of a single clearly-labeled button.

Perfect for Any Proto-Sound 2.0 or 3.0 Equipped Train Set!

DCS Commander System
w/100 Watt Power Supply
50-1029 \$229.95

DCS Commander Controller
50-1028 \$149.95

Features Include:

- Speed adjustment in one-scale mile-per-hour steps
- Independent feature control: tune your engines' sound, lights, smoke and acceleration/deceleration settings
- Smoke On/Off
- Doppler Sounds: simulate the classic sound effect of a train approaching and then whizzing past
- Accent Sounds: activate any one of 7 individual sounds, including signal forward and reverse sounds, coupler slack, engine start-up and shut-down, engine labor and engine drift
- Activate Passenger Station and Freight Yard Sounds
- Individual locomotive control: select up to 10 Proto-Sound 2.0 or later engines
- Selectable control mode configurations: choose between analog DC, DCC and DCS operating modes
- Track Signal Test: test your layout's signal strength using the built-in signal strength analyzer.
- Proto-Whistle Quillable Sound Activation: access the built-in Proto-Whistle quillable sounds*** found inside your Proto-Sound 2.0 or later locomotives and using the thumbwheel to "play" your locomotive's whistle just like a real engineer!
- Access Whistle Signal Sounds: activate grade crossing whistle signals**** on your Proto-Sound 2.0 or later equipped locomotive

** Requires Proto-Sound 2.0 locomotive onboard 3-volt system or Proto-Sound 3.0 locomotive onboard system. Proto-Sound 2.0 3-volt systems are identified by their square battery charging jack on the locomotive chassis. See the locomotive's operator's manual for the exact location of the charging jack.

*** Proto-Whistle quillable sounds not found in all Proto-Sound 2.0 or later equipped locomotives. Refer to your locomotives operator's manual to determine if your locomotive is equipped with Proto-Whistle quillable sounds.

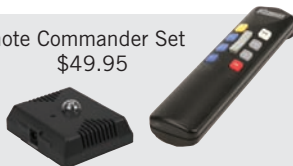

****Proto-Whistle grade crossing signals not found in all Proto-Sound 2.0 or later equipped locomotives.

DCS Remote Commander Set

The DCS Remote Commander is an inexpensive wireless solution capable of accessing the most popular command control functions programmed into Proto-Sound 2.0 or 3.0 locomotives. The DCS Remote Commander handheld controller features clearly labeled, one-button control of 9 engine functions. There are no function keys or special codes to remember. Access the locomotive whistle or horn, bell, smoke, direction and speed with just a single button push. You can also access Passenger Station or Freight Yard Proto-Effects, engine startup and shutdown sounds and control the front or rear Proto-Couplers with this lightweight, easy-to-use remote.

Adding a DCS Remote Commander to your existing layout is simple: just plug your power supply into the DCS Remote Commander receiver and the output wires from the receiver to your track lockon. The DCS Remote Commander can accept any power input (AC or DC) up to 20 volts and 8 amps, making it a perfect choice for small and moderately sized layouts.

DCS Remote Commander Set
50-1033 \$49.95

Features Include:

- Speed adjustment in one-scale-mile-per-hour steps
- Volume Control
- Smoke on/off
- Front & Rear Proto-Coupler Control
- Engine Start-up & Shutdown Sounds
- Activate Passenger Station and Freight Yard Sounds
- Whistle/Horn Control & Bell On/Off
- Locomotive Direction Control
- Wireless Communication With DCS Remote Commander Receiver
- LED Power On Lamp (Receiver Only)
- AC or DC Power Input
- Remote Requires (2) AA Batteries (not included)
- Unit Measures: 6 inches

AS A MEMBER OF THE M.T.H. RAILROADERS CLUB YOU'LL RECEIVE:

Limited-Edition Club Car

Each year we produce beautifully decorated cars exclusively for our Club members. Members automatically receive the car that matches their Club membership (RailKing, Premier, Tinplate, S Gauge, HO, or One Gauge) and have the option to collect the other Club cars as well.

The CrossingGate™ Club Magazine

You will receive our quarterly full color Club magazine, jam-packed with product news, layout visits, rail history, and step-by-step articles on how to enjoy M.T.H. products even more.

1st Class Mailing of M.T.H. Catalogs

Club Members get all of our catalogs earlier than all our other mailing list members, via First-Class mailings, so they can order from their local train store before the best items are sold out.

RailWare™ Software DVD

Use your computer to design track layouts, search the database of all M.T.H. products, look at our past catalogs, listen to Proto-Sound 3.0 train effects, and much more. This DVD retails for \$79.95, but is yours FREE as a Club member.

Unique Club Products and Discounts

You'll have the option to purchase uncataloged members-only engines and rolling stock, and take advantage of members-only discounts on select cataloged items.

Club Card & Lapel Pin

Show the world your membership in this elite group of model railroaders with your high-quality embossed membership card and beautiful enameled lapel pin.

Proto-Sound® 2.0 Upgrade Kits

Club members can save an additional 15% on these kits for upgrading older locomotives.

Club Web Site

Visit www.mthtrains.com & type in your member number to gain access to the Club web site. Here you can exchange messages with other Club members, and even build your own homepage.

CARRY ON THE M.T.H. TRADITION WITH MEMORABILIA AND COLLECTIBLES

MTH Promotional DVD

This interactive DVD is packed full of sights & sounds guaranteed to make you rethink how far the hobby of model railroading has come. You'll learn about some of the most innovative products ever produced and marvel at the sophistication of a product line unmatched by other model train manufacturers.

Previous Year Club Cars

MTHRRRC members can still obtain earlier produced MTHRRRC cars by visiting the MTHRRRC pages on the website. Only MTHRRRC members can get these cars!

A Toy Train Story

This comprehensive history of M.T.H. is a must for toy train hobbyists. 350 pages & 1900 color photos, hard cover. Add this book to your membership for only \$25.00 (50% off the \$49.95 cover price)!

www.mthtrains.com

We don't think we're exaggerating when we say M.T.H. has the most useful train manufacturer's site on the Internet. Here's just a sample of the answers you can find online.

HOW DOES IT WORK?

Misplaced an instruction manual or just want to know how a product works? Use Product Search to look up the item and view its instruction manual.

WHAT'S THE LATEST INFO ON ...?

Use Product Search to find the latest info on new products before they're delivered — sound sets, cab numbers, feature and paint scheme updates, and other information that arrived after the catalog was published.

DID YOU EVER MAKE?

Use Product Search to search through nearly all of the 15,000 items we've made in the past 33 years, for your favorite road name, engine, or type of rolling stock.

DOES ANY DEALER STILL HAVE ...?

Locate hard-to-find items with our Product Locator, which searches the inventories of M.T.H. dealers across the country.

WHEN IS IT COMING?

Our online Shipping schedule is updated frequently to let you know what's coming soon to your hobby shop.

ARE YOU GOING TO MAKE?

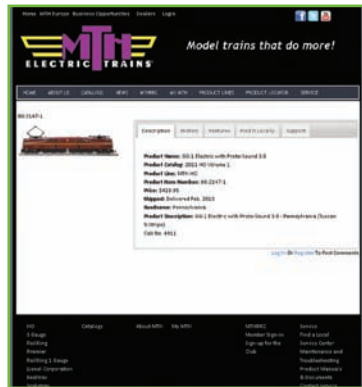

View the last several M.T.H. Catalogs online. Or click on Video to see M.T.H. products in action.

HOW CAN I FIX...?

The Service area of our site allows you to email a question to our factory technicians or find which of our 150+ local service centers is closest to you.

WHAT REPAIR PART DO I NEED?

Use Product Search to find exploded diagrams and parts lists for M.T.H. locomotives and accessories, and then order the parts online or by phone.

WHAT'S NEW?

New arrivals and other news are posted frequently on our home page.

HOW CAN I LEARN MORE ABOUT DCS?

Follow the link to the protosound2.com Web site for DCS and Proto-Sound information — and a list of Authorized DCS Demo Centers where you can try DCS hands-on.

HOW CAN I UPDATE MY DCS SYSTEM OR CHANGE A SOUND SET?

Only M.T.H. allows you to update your control system or change an engine's sound set right over the Internet. Follow the link to the protosound2.com Web site for DCS and Proto-Sound 2.0 downloads.

To get the news as it happens, sign up for our free weekly electronic newsletter, with information on new M.T.H. products, industry news, and sneak peeks at upcoming specials!

Just go to mthtrains.com and click on Newsletter Signup.

Not all products depicted in this catalog are production models. In some cases, the items pictured may be HO, O Scale or some other scale product.

All item's graphic features and content are subject to change after publication. All product features may be verified on their retail packages. M.T.H. Electric Trains is in no way affiliated with any of the railroads featured in this catalog.
