

Wiring Instructions

The MTH Traffic Light Electronic Control Box supports up to 12 simultaneously connected LEDs (four single traffic lights). To use four single traffic lights with a single control box, splice two traffic lights into each Electronic Connector. To connect, match wire colors from the traffic light to the wire harness in the electronic connector using wire nuts (*wire nuts not included*).

Operating Instructions

When using two or more simultaneously connected traffic lights, they will light in opposing patterns to simulate an alternating flow of traffic.
